

# ARVENA v1.0

## UI/UX BLUEPRINT & INFORMATION ARCHITECTURE

**Status:** BUILD-READY

**Depends on:** Master PRD ARVENA v1.0

---

### 1. UX NORTH STAR

ARVENA harus membuat pengguna merasa:

“Saya tahu apa yang harus dilakukan berikutnya.”

Bukan:

“Saya tahu ada banyak fitur.”

Semua layar harus menjawab salah satu dari empat pertanyaan:

1. Apa yang perlu perhatian?
  2. Apa yang sedang dikerjakan?
  3. Siapa yang bertanggung jawab?
  4. Apa langkah berikutnya?
- 

### 2. GLOBAL INFORMATION ARCHITECTURE

#### Desktop Navigation

##### Home

- Dashboard

##### Sales

- Leads
- Quotes
- Follow-ups

##### Operations

- Jobs

- Calendar
- Customers
- Assets

## Finance

- Invoices
- Payments

## Team

- Team Members
- Performance

## Insights

- Reports

## System

- Integrations
- Settings
- Billing & Usage

Menu hanya muncul jika:

- role punya permission;
- module aktif;
- plan mengizinkan.

# 3. CORE ROUTES

## Authentication

`/login` `/signup` `/forgot-password` `/reset-password`

## Onboarding

`/onboarding` `/onboarding/business` `/onboarding/template` `/onboarding/team` `/onboarding/customer` `/onboarding/first-job` `/onboarding/complete`

## Dashboard

`/dashboard`

## Leads

`/leads` `/leads/new` `/leads/[id]` `/leads/[id]/edit`

## Quotes

`/quotes` `/quotes/new` `/quotes/[id]` `/quotes/[id]/edit`

## Follow-ups

`/follow-ups`

## Customers

`/customers` `/customers/new` `/customers/[id]` `/customers/[id]/edit`

## Jobs

`/jobs` `/jobs/new` `/jobs/[id]` `/jobs/[id]/edit`

## Visits

Tidak memiliki nav utama. Akses melalui Job atau Calendar.

`/visits/[id]`

## Calendar

`/calendar`

## Assets

`/assets` `/assets/new` `/assets/[id]` `/assets/[id]/edit`

## Invoices

`/invoices` `/invoices/new` `/invoices/[id]` `/invoices/[id]/edit`

## Payments

`/payments` `/payments/new`

## Team

`/team` `/team/invite` `/team/[id]` `/team/[id]/edit`

## Performance

`/performance`

## Reports

`/reports` `/reports/sales` `/reports/operations` `/reports/finance` `/reports/customers` `/reports/team`

## Integrations

`/integrations` `/integrations/whatsapp`

## Settings

`/settings` `/settings/business` `/settings/localization` `/settings/tax` `/settings/workflows` `/settings/templates` `/settings/roles` `/settings/billing`

---

# 4. DASHBOARD

## Top Header

Show:

- organization name;
- current branch filter if applicable;
- search;
- notifications;
- profile.

## Section 1 — Perlu Perhatian

Highest-priority area.

Cards sorted by urgency:

1. Follow-ups overdue
2. Unassigned Jobs

3. Schedule conflicts
4. Late Visits
5. Overdue Invoices
6. Failed integrations/automation
7. Recurring service due

Each card:

- count;
- financial amount if relevant;
- 1-line explanation;
- CTA.

Example:

**4 Invoice Overdue** Rp8.400.000 belum dibayar.

Review Invoices

---

## 5. BUSINESS HEALTH CENTER

Located on Dashboard.

Recommendations are action-based.

Examples:

**12 leads have no next follow-up** CTA: Review Leads

**6 recurring services due this week** CTA: Schedule Jobs

**27 customers inactive for 180+ days** CTA: Create Reactivation Follow-ups

No generic AI-style advice.

Recommendations must be traceable to actual records.

---

## 6. LEADS LIST

### Desktop Columns

- Customer

- Phone
- Service
- Status
- Temperature
- Sales
- Source
- Next Follow-up
- Updated
- Actions

## Filters

- search name;
- phone;
- status;
- temperature;
- sales;
- source;
- overdue follow-up;
- created date.

## View Toggle

Table | Pipeline

## Row Actions

- Detail
- WhatsApp
- Call
- Edit
- Add Follow-up
- Convert

---

# 7. LEAD DETAIL

Header:

- customer;
- lead status;
- temperature;
- assigned sales.

Primary CTA: Next Action

Context-sensitive:

- New → Contact
- Qualified → Create Quote
- Quote accepted → Convert to Job

Tabs:

### **Overview**

Request, source, value estimate.

### **Follow-ups**

Past and scheduled.

### **Notes**

### **Activity**

### **Quotes**

---

## **8. CUSTOMER LIST**

Columns:

- Name
- Phone
- Type
- Tags
- Last Job
- Next Service
- Assigned Sales
- Updated

Mobile becomes cards.

Quick actions:

- WhatsApp
  - Call
  - Create Job
  - Detail
-

## 9. CUSTOMER DETAIL

Header: Customer name

Customer type

Phone

Primary address

Primary actions:

Create Job WhatsApp Create Quote

Tabs:

- Overview
- Jobs
- Assets
- Quotes
- Invoices
- Payments
- Follow-ups
- Notes
- Activity

Important customer warnings appear above tabs.

Example:

**2 unpaid invoices**

---

## 10. CREATE CUSTOMER

Sections:

### Identity

Name

Person/Company

### Contact

Phone

WhatsApp

Email

## Address

Address

Map pin optional

## Business

Tags

Source

Assigned sales

Phone validation occurs on blur.

Duplicate warning:

Possible duplicate found.

Actions:

Only authorized user may override.

---

# 11. JOBS LIST

Columns:

- Job #
- Customer
- Service
- Status
- Next Visit
- Assigned Team
- Priority
- Amount
- Updated

Filters:

- search;
- status;
- priority;
- worker;
- branch;
- scheduled date;
- overdue;

- unassigned;
- service type.

Views:

List | Board

---

## 12. JOB DETAIL

Header:

JOB-2026-000123 Customer  
Service  
Status  
Priority

Primary CTA changes by state.

Draft: Confirm Job

Confirmed: Schedule Visit

Scheduled: Start / View Visit

Completed: Create Invoice

Secondary menu:

- Edit
- Duplicate
- Cancel
- Archive

Tabs:

### Overview

summary, customer, source, quote, dates.

### Visits

all appointments.

### **Checklist**

job-level checklist summary.

### **Photos**

before/during/after.

### **Materials**

optional.

### **Notes**

### **Finance**

quote, invoice, payment status.

### **Activity**

---

## **13. CREATE JOB**

Maximum 5 visible sections.

### **1 Customer**

Search existing customer. Quick create allowed.

### **2 Service**

Service catalog or custom service.

### **3 Schedule**

Optional initial visit.

### **4 Assignment**

Worker/team.

### **5 Details**

Priority, notes, tags.

Advanced fields collapsed.

CTA: Create Job

Secondary: Save Draft

If conflict: show warning before final submit.

---

## 14. VISIT DETAIL

Worker view prioritizes:

- customer;
- address;
- time;
- issue;
- checklist;
- photos.

Primary action changes sequentially:

Depart → Arrived → Start Work → Finish Work

Avoid showing every possible status button simultaneously.

---

## 15. CALENDAR

Views:

- Day
- Week
- Month
- Worker

Desktop supports drag/reschedule after confirmation.

Cards show:

- customer;
- service;
- worker;
- time;
- status.

Conflict visualization: warning icon + text.

Mobile: day-first view.

---

## 16. QUOTES

List columns:

- Quote #
- Customer
- Amount
- Status
- Expiry
- Created
- Sales

Quote detail:

- customer snapshot;
- items;
- discount;
- tax;
- terms.

Primary CTA by state:

Draft → [Issue Quote](#) Issued → [Mark Accepted](#) Accepted → [Create Job](#)

---

## 17. INVOICES

List columns:

- Invoice #
- Customer
- Total
- Paid
- Outstanding
- Due
- Status

Filters:

- status;

- overdue;
- date;
- customer;
- branch.

Invoice detail shows:

- immutable issued snapshot;
- payments;
- outstanding balance;
- history.

Primary CTA: [Record Payment](#)

If Draft: [Issue Invoice](#)

---

## 18. FOLLOW-UPS

Default landing: [Today](#)

Tabs:

- Today
- Overdue
- Upcoming
- Completed

Each card:

Customer  
Reason  
Assigned Sales  
Due time

Actions:

- Chat
- Call
- Done
- Snooze

Snooze options:

- Later today
- Tomorrow
- 3 days

- Custom
- 

## 19. ASSET DETAIL

Header: Asset name/type

Customer

Status

Fields:

- brand;
- model;
- serial;
- installed;
- warranty.

Tabs:

- Overview
- Service History
- Jobs
- Photos
- Notes

CTA: [Create Service Job](#)

---

## 20. TEAM

List:

- name;
- role;
- branch;
- availability;
- active jobs;
- status.

Detail:

- profile;
- skills;
- availability;
- assigned jobs;
- performance summary.

No salary/payroll in v1.

---

## 21. REPORTS UX

Reports should begin with:

- date range;
- branch;
- team filter.

Then:

- summary metrics;
- trend;
- table.

Every report should offer: [View Records](#)

No chart that cannot be traced to underlying data.

---

## 22. SETTINGS UX

Settings grouped.

No giant one-page form.

Each section:

- title;
- explanation;
- fields;
- Save.

Destructive settings separated visually.

---

## 23. INTEGRATIONS UX

Integration cards show:

- provider;
- status;

- connected account;
- last sync/event;
- error state.

WhatsApp:

Connected  
Connection Problem  
Disconnected

Never show connection as healthy if webhooks fail.

---

## 24. GLOBAL SEARCH

Keyboard shortcut: `Ctrl/Cmd + K`

Search:

- Customers
- Jobs
- Leads
- Quotes
- Invoices
- Assets

Results grouped by entity.

Permission-aware.

---

## 25. MOBILE OWNER UX

Bottom nav:

`Home | Jobs | Customers | Calendar | More`

Critical mobile actions:

- create customer;
- create job;
- assign;
- reschedule;
- invoice;
- payment;

- follow-up.

Floating create button may expose:

Customer Lead Job Invoice

---

## 26. WORKER MOBILE UX

Bottom navigation:

Today | Jobs | Notifications | Profile

Today screen:

Current visit first.

Then upcoming.

Each job card:

- time;
- customer;
- service;
- location;
- status.

No revenue dashboard.

No irrelevant menus.

---

## 27. WORKER OFFLINE UX

Connection indicator:

Online Offline – changes will sync later

Every queued action shows:

Pending

Synced

Failed – Retry

Worker may not lose notes/checklist due to temporary network loss.

---

## 28. EMPTY STATES

Every primary list needs:

- explanation;
- next action.

Example Leads:

**Belum ada lead** Mulai dengan menambahkan permintaan customer pertama.

Add Lead

---

## 29. ERROR STATES

Pattern:

**What happened** **What is safe** **What user can do**

Example:

Invoice belum tersimpan.

Tidak ada pembayaran yang berubah.

Periksa koneksi dan coba lagi.

CTA: Retry

---

## 30. LOADING STATES

Use:

- skeleton rows;
- skeleton cards;
- disabled CTA with active label.

Avoid blocking full-screen spinner for routine actions.

---

## 31. TOAST RULES

Success: short and non-blocking.

Error: actionable.

Do not use toast for critical irreversible information.

---

## 32. FORM VALIDATION

Inline validation.

Do not clear form on error.

Server validation always authoritative.

Examples:

- phone invalid;
  - date conflict;
  - invoice amount;
  - duplicate phone.
- 

## 33. DESIGN SYSTEM TOKENS

### Color

Primary: #073525

Secondary: #698D70

Soft: #98ACA4

Canvas: #FDFDFB

Text Primary: #17211D

Text Secondary: #59645F

Border: #E3E7E4

Error: semantic red

Warning: semantic amber

Info: semantic blue

---

## 34. TYPOGRAPHY

Use a clean sans-serif family.

Hierarchy:

Display: 32–40

H1: 28–32

H2: 22–24

H3: 18–20

Body: 14–16

Caption: 12–13

Avoid ultra-small UI text.

---

## 35. SPACING

Base spacing unit: 4px

Primary spacing scale:

4  
8  
12  
16  
24  
32

48

64

---

## 36. RADIUS

Buttons: 8–10px

Inputs: 8px

Cards: 12px

Large panels: 16px

Avoid excessive pill-shaped UI.

---

## 37. SHADOW

Minimal.

Use border first.

Shadow only for:

- dropdown;
  - modal;
  - floating surfaces.
- 

## 38. BUTTON HIERARCHY

Primary: solid Arvena Forest.

Secondary: outlined.

Tertiary: text/ghost.

Destructive: red.

One main primary CTA per workflow region.

---

## 39. TABLE SYSTEM

Required capabilities:

- sort;
- filter;
- pagination;
- column visibility later;
- row actions;
- loading;
- empty;
- error.

Mobile equivalent: cards.

---

## 40. MODAL VS DRAWER

Modal: small confirmations.

Drawer: quick edit/detail without losing list context.

Full page: complex creation/edit flows.

---

## 41. ACCESSIBILITY

Minimum:

- keyboard navigable;
  - visible focus;
  - proper label associations;
  - semantic buttons;
  - accessible dialogs;
  - icon buttons have labels;
  - color not sole indicator.
- 

## 42. UX PERFORMANCE

User should receive visual acknowledgement within ~100–200 ms after interaction.

Network action immediately enters visible pending state.

Do not wait silently.

---

## 43. UX ACCEPTANCE

Core new user should complete:

Customer creation  
Job creation  
Assignment  
Completion  
Invoice

without external manual.

Confusion requiring training is considered UX debt.

---

## 44. LOCKED UX PRINCIPLE

Do not add features to a screen because “there is space”.

Every visible control must support the user's immediate workflow.

ARVENA should feel simpler than the operational complexity underneath it.
